

DEVWING.

# ABOUT WHO WE ARE.

[info@devwing.hu](mailto:info@devwing.hu)

[devwing.hu](http://devwing.hu)

We are a dynamically growing IT company based in Budapest, Hungary.  
We build online platforms, products and process automation software for our Hungarian and international clients.

We are experts in microservices-based software development and operations and our solutions. Our services related to containerized software solutions include

- Migrating monolithic apps to microservices
- Microservice development and testing
- Deploying and operating microservices-based software solutions

We are highly selective in choosing projects, but we deliver to our clients' satisfaction once we commit.

# WHAT ARE WE GOOD AT.

1.

## Development

custom developments  
website development  
webshop development  
mobile application development

2.

## System Operation

network and server architecture  
2nd level support  
enterprise infrastructure  
backups and high availability

3.

## DevOps

process automation  
development of a developer monitoring system  
microservice  
rescue system design  
CI / CD, continuous integration and continuous performance

4.

## UI/UX

brand design  
webdesign  
offline design  
advertising design

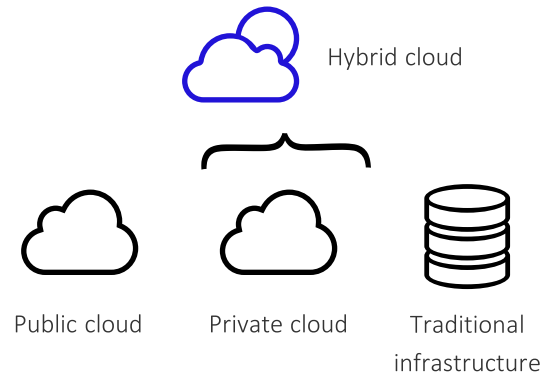

We don't give our clients  
what they dreamed of but  
what they actually need.

# KEY BENEFITS.

1. Cost-effectiveness with fast time-to-delivery
2. Agility by being able to develop, test, deploy, roll back and redeploy swiftly
3. High consistency and predictability by deploying containerized solutions
4. Modularity, flexibility, and scalability
5. Repeatability and readiness for automation

# IN TECH WE TRUST.

# BUSINESS PHILOSOPHY.

|| We are asking questions,  
so we can deliver solutions.

We consider it essential to stay in close touch with our customers, so considering any limitations (such as distance, busy schedules, etc.), we try to keep in touch with as many communication channels as possible. Typically, we use e-mail, phone, and web meeting applications, such as Jitsi, but we can accommodate our clients' preferred way of communication.

# RECENT PROJECTS.

# ÉPSOFT.

ÉPSOFT is our own digital product, which is an ERP (Enterprise Resource Planning) System. Unlike other ERP Systems, ÉPSOFT was designed for the special needs of the construction industry.

With the help of ÉPSOFT the users can be up to date with the status of their projects, their resources and stock, and they can easily optimize their everyday workflow.

[More about the project](#)

## 1.

### Advantages of ÉPSOFT

**MODULAR** It's modules and functions work individually, as well. So the software can be modified easily according to the user's needs.

**EFFECTIVE** With the help of ÉPSOFT the everyday tasks getting more efficient. Instead of using several different software the users can use one platform to work together with the colleagues and partners. The information flow improves while the administrative tasks decline.

**SAFE** To the different scope of duties and modules you can connect different authority levels. With this you can easily adjust the users' access to the different parts of the software.

## 2.

### With the help of ÉPSOFT

- You will have up-to-date information about your business and operation.
- Preparing a budget or quotation is getting easier with ÉPSOFT.
- You will be always up-to-date about your current stock.
- You can store, edit and share all of your documents in one platform.

# TRANS-EUROPE. SALES PLATFORM

We have developed a sales platform for Trans-Europe Plc, a large Hungarian software distributor and reseller, with multiple integrations.

 [trans-europe.hu/en](https://trans-europe.hu/en)

## 1.

### Solutions and technologies

Automated ERP system and sales platform for software manufacturers and resellers, all the way to end users.

Technologies: Laravel, Kubernetes, MinIo, SAP integrations

ADOBE MARKETPLACE  
INTEGRATION

JETBRAINS INTEGRATION

MICROSOFT MARKETPLACE  
INTEGRATION

# FOXPOST.

FOXPOST specializes in the parcel delivery method.  
It is one of the most popular domestic logistics providers in Hungary with the largest such national network.

With the introduction of our DevOps service, our goal was to create a stable, reliable system that provides a high level and up-to-date availability.

## 1.

### DevOps service for FOXPOST

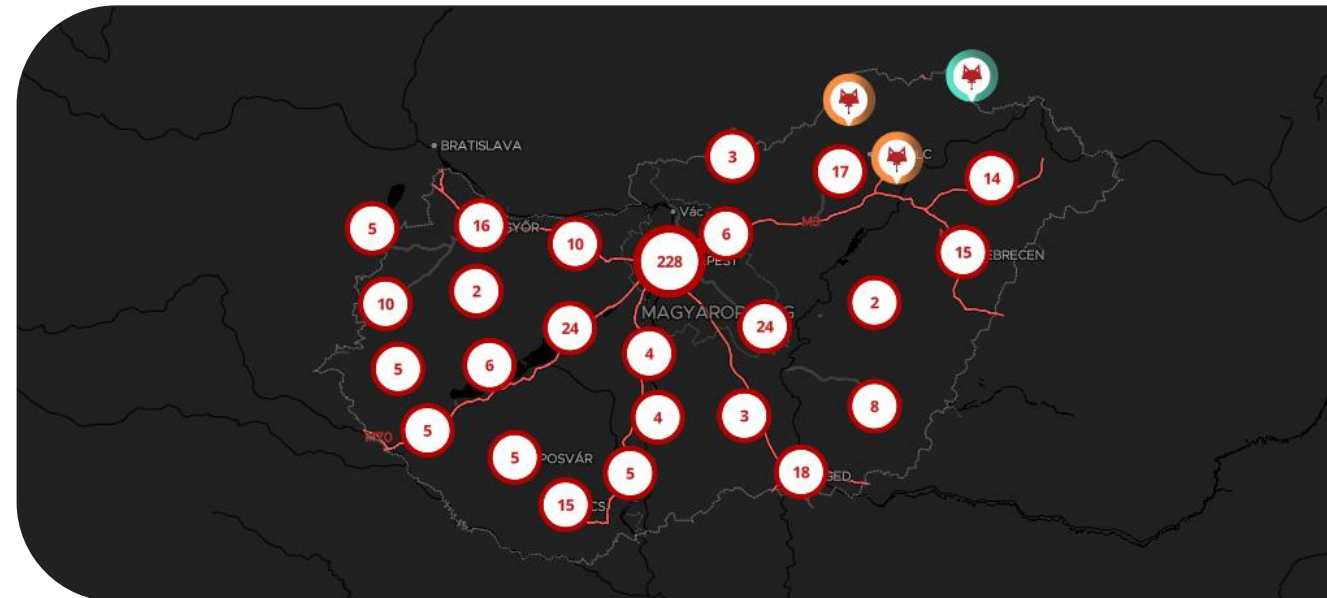

After evaluating the current system, our task was to create the appropriate test and development environment, and then to develop the infrastructure.

Highlights: development and operation of FOXPOST and FoxMessage systems, development of OpenStreetMap, introduction of process automation, use of CI / CD tools, as well as continuous DevOps support.

## 2.

### Solutions and technologies

Solutions: Infrastructure planning, DevOps process design, monitoring and operation  
Technologies: Zabbix, Jenkins, Docker, Gitlab (CI / CD)

# Thank you for your attention.

[devwing.hu](http://devwing.hu)

Within the years we developed several unique platforms. The list contains complex ERPs, webshops and WordPress pages with our own developed plugins.

We are currently looking for partners in order to reach more people with our software.
